THE MARKET DISRUPTOR PROJECT WITH METTLE

TERRAGREEN

Paving the way to a Greener World with Blockchain Technology

In 2012, the global demand for power and energy was computed to be 158,000 TWh, and it's predicted to be rising ever since. Unfortunately, renewable energy sources have only provided for around 19.2% of this total world power demand

It unites everyone involved in the process and brings them onto a common platform to supply, exchange, trade, and utilize cleaner energy resources. In doing so, it eliminates middlemen throughout the supply chain. Be it technology, supply chain, or financial aspects- TerraGreen simplifies it all.

To pave the way for a cleaner environment and to eliminate the hurdles that are plaguing the same, TerraGreen has launched a renewable energy platform that's powered by blockchain technology. With over two decades of experience in the space of green energy, the founding members of the project are incredibly passionate about the vision of designing a sustainable economic system that runs on

renewable energy sources. Moreover, for the Terragreen project, Terragreen would produce its own coins and these coins will be distributed to the general public for the crowdfunding. The investment made in the coins would be profitable to the major Biomass plant as

well as to the general public where they can gain through their investment and plant can produce more amount of renewable products. These would help to increase the value of Terragreen coin and its products economically. Though its all about profit earnings and earning more funds.

These renewable energy products, at the end of the process, will be in their greater heights of economic values.

With TerraGreen Coin, consumers can directly participate or involve in the biomass waste management and production of renewable energy products, which in return support the green energy revolution.

The TerraGreen platform does not shy away from revolutionizing the standard

blockchain protocol. Developing its own blockchain technology based on SHA-384, it is radically transforming online markets and programmable transactions with public blockchain shared system, centralized blockchain shared system, and private blockchain shared system.

By leveraging blockchain and cryptography, the project empowers all the stakeholders, including biomass suppliers, renewable energy technology developers, power producers and investors with higher returns and fairer tariffs. Both buyers and sellers save time and other resources with more efficient processes.

TerraGreen has already begun its journey to success. Having secured numerous -

producers of renewable energy, the combined power generation that it has secured it over 100MWe across the ten countries of Association of Southeast Asian Nations (ASEAN).

The project has also identified its greatest challenges and is working relentlessly to solve the same.

A significant roadblock in the production of renewable energy is shortage of raw materials for processing. Instead of relying upon the industry or other players to provide solutions, TerraGreen has already acquired 2000 hectares of land in Malaysia for the above-mentioned energy

crop plantation and will also be using it to supply raw materials for the sector.

Jumpstart Your Portfolio With STO's in 2019

In 2017 and the first two quarters of 2018, ICOs (Initial Coin Offerings) super-charged investment portfolios with outsized gains. In regards to crypto, 2017-2018 was the year of ICO. In the last quarter of 2018, a lot of investors seems to be excited about security tokens / tokenized securities.

So What is next?

Well, there are still promising upcoming and ongoing ICO's in the market. Coming up next: We will see more Security Token solutions and services in 2019, and they are going to be huge. So what is the benefit on STO's?

Do you know why investors are trying to get some Security Token Offerings (STO)? There are some reasons to make some STO investment. The first reason is the capacity to sell securities to anyone in the World is a vast world-changing evolution. Another one is the promise of global liquidity.

In 2019 STO's will merge ICOs & IPOs to provide a regulated version of digital token offerings. With this regulation, There are

some requirements for STO's and these requirements are giving us many advantages.

How can you take advantage?

Start Researching Now. Finding tomorrow's most profitable STOs will begin first and foremost with the research you do today.

Have Your KYC Documents Ready!

STO investment requires a full suite of KYC documentation to comply with global investor regulations. (Some STO's doesn't require KYC) That means you should have your documents at the ready so that you can take advantage of the next security token offering that catches your eye.

Find Upcoming and Ongoing Security Token Offerings

Ready to buy security token assets? Then you'll need to seek out security token offerings that are coming up or are already in progress. Popular ICO search websites like ICOBench, ICOMarks, ICORating have welcomed STOs to their platforms and provide both rankings and review for them.

A GREAT START TO 2019

*It's been an exciting start to 2019
filled with enthusiasm despite market
conditions and I'm looking forward to
continued progress in the month to come.*

*2019 kicked off with a
rapid start. Blockchain
is not dead and
neither is sentiment
after a rollercoaster
bear market in
cryptocurrencies in
2018.*

On January 10, 2019 I spoke at the Blockchain Supply Chain Forum in Hong Kong to an enthusiastic group of industry executives and professionals from the supply chain sector. The topic was about "How Blockchain is Making Supply Chain More Efficient" from a data driven perspective through examples such as 53% out of 1053 Senior Executive respondents in a Deloitte survey named supply chain as the number one use case for blockchain technology and highlighting what supply chain executives see as their biggest challenges while comparing that to the focus of various blockchain solutions being developed.

We also explored very specific Food Supply Chain Traceability issues across North America, Europe, and Asia highlighting specific outbreaks and scandals over the last decade and how these are being addressed by specific blockchain initiatives with companies such as Walmart, IBM, Tsinghua University, DiscoveryIoT, and Vechain.

On January 11, 2019 I was honoured to have delivered a keynote and was part of the Presentation of the World Blockchain Awards (WBA) Asia at the reputable World Blockchain Forum (WBF) in Shenzhen, China. One of the key questions people always ask in the blockchain or cryptocurrency markets is "What are the real developments happening in Blockchain?" and we helped to address that question. The keynote featured insights into "How Blockchain Will Transform Industries" with specific examples of what real companies are achieving across various industries including Supply Chain Management, Enterprise Communication, Enterprise Storage, Banking & Finance, Investment Banking, Identity Management, Retail & E-commerce, Entertainment, Education, and Media.

Gone are the days when a flashy website and a vaguely worded white paper are going to attract investors. With the bear market dragging investment values down by more than 90%, the once busy cryptocurrency forums are a ghost town.

The majority of investors are feeling burnt by the economic losses and let down by the empty promises of scam ICO's (Bitconneeeeect!), while the governments around the world are circling like vultures over the remains.

Sam Lee is the founder and CEO of Blockchain Global. The company has invested more than US\$300 million in 80 blockchain-enabled companies and projects. Blockchain Global is a leading multi-national enterprise which focuses on the commercialization of blockchain technology through international blockchain investments, blockchain innovation hubs and network infrastructure services; facilitating the needs of a global blockchain market through its offices Australia, Singapore, China, and Japan.

Whilst ICO's are languishing on the token issuance was greenlighted life support, a new alternative has by the Japanese SEC, paving the way for future projects.

TURNING POINT

Traditional listed companies are finally mobilizing and entering the crypto space. There is every reason to believe tokenization is the future of the business process and that financial systems will be more efficient and compliant. Together with a global consortium of the best and brightest minds in blockchain and beyond, we can provide the gateway for listed companies to enter the crypto world.

Established companies have taken note of the potential to unlock new forms of value and revenue streams through blockchain technologies and tokenization. First coined by Daniel Bateman from Blockshine Technology and I, the LCO (Listed Co. Coin Offering) has officially arrived.

Traditional listed companies are finally mobilizing and entering the crypto space, with Japanese real estate company Ruden Holdings Co Ltd. being the first to issue such a token.

Thanks to the partnership with Blockshine, a team comprised of technical, legal & investment experts,

An LCO combines the advantages of potential massive profits expected in the next bull market with the proven performance and transparency that is required by listed companies. Legally obligated to provide information on company finances to shareholders, listed companies don't come with the risk of ICO organizers taking the money raised and permanently retiring to the Bahamas.

We expect LCO's to help unlock the fourth dimension of the financial markets, the other three being cash, debt and equity, through creating smart contract powered utility tokens that generate new value and real wealth.

Rising Star Erika Rosenstein.

*Risk Analyst, Investor Relations Expert, ICO and STO Advisor
Speaker and Panelist, including: Startup Grind, Legal Hackers
Founder of the italian magazine Business and Leaders*

Erika has been working as Risk Analyst and Financial Reporter before starting her career as ICO and STO Advisor. While she was studying law, Erika had the chance to work as trainee at the European Parliament, where she took part in the meetings of the Parliamentary Committee on Economic and Monetary Affairs. From that moment on, her life completely changed.

She holds a Master in Risk Management and has helped several Startups in managing investor relations, developing financial strategies and mitigating key elements of the companies risk profile.

“More often than not, companies do not consider the risks until they have to face them. Especially in the blockchain world – where we use to find tons of scams – investors look for stability and business continuity: identifying and managing business and financial risks can be extremely helpful for the startups”.

Erika is one of the volunteer professionals who are working with the Municipality of Naples – Italy in order to apply the blockchain technology to the Public Sector.

POZESS.

DECEMBER 2018. PROJECT WITH METTLE.

Kaustuva Mukherjee
Founder & CEO

POZESS has officially announced its plans to transition from the current ICO to a Security Token Offering (STO), with exact dates and full details to come. The STO will be fully SEC and ESMA compliant and investors who purchase the POZESS security token will be entitled to future dividends of revenue generated by the platform. A dual token model will allow the PZS utility token to continue to be available for the users of the platform while the company offer its investors security tokens.

POZESS, a global socially-curated fashion marketplace driven by photo and video sharing, featured as the “Project with Mettle” on CIT Dec 18 edition, has announced their plans to transition to a security token offering (STO) from an ICO. The offering shall be fully regulatory compliant! Details of the token sale shall be announced soon. The decision came after careful considerations of the regulatory requirements and to provide confidence, mutual protection, security and assurance to their valued investors. Investors who purchase the POZESS security token will be entitled to dividends from future revenue generated by the platform.

The team has also announced a pre-STO equity round that a limited number of early investors can take advantage of.

The decision involved careful considerations of several factors, but ultimately we believe this is the best decision for our investors and the continued progress of the company. We want the POZESS platform to stand the test of time and to ensure investors of our commitment to make the project a grand success” says

DISCOVER UNIQUE PRODUCTS FROM AROUND THE WORLD

GET REWARDED FOR SHARING YOUR FAVORITE ITEMS

www.pozess.io

Kaustuva Mukherjee, founder and CEO of POZESS.

The team has already made significant progress in the platform development with the release of its alpha version and has announced a joint partnership with PLAAK, an ecosystem designed to provide blockchain-based technology solutions.

“The branded wallet is a giant step towards making cryptocurrency mainstream,” says Kaustuva. “I fervently believe that mass adoption, security, and ease of use is the way to make digital currency replace the fiat currency in financial transactions soon. The PZS wallet is a step towards that,” he added.

POZESS launched its website application in 2018 and continues to have robust plans for the future, including the release of the alpha mobile application (iOS and Android) in the first quarter of 2019. Development is underway and the fully functioning beta version of the platform is expected to be released in the third quarter of 2019. Selection of retail merchants will begin in the coming months and retailers will be invited to join POZESS as early as the

second quarter of 2019!

The team is proud to have built a collaborative platform aimed towards growth, security, and mass adoption, and looks forward to cultivating the multiple strategic partnerships that are in the pipeline.

To support the POZESS project and to participate in the POZESS STO, investors can sign up on the Pozess.io website, and join the [telegram](#) and [bitcointalk](#) channels.

To participate in the pre-STO round please email kaus@pozess.com

POZESS (PZS) tokens will be listed on the PLAAK exchange after the end of its STO in July 2019. This will allow the POZESS community to adopt the POZESS (PZS) branded NFC and Bluetooth hardware wallet. This wallet, powered by PLAAK, will also enable the POZESS network to own and use the PZS token for secure purchases everywhere.

FIDELITY HOUSE

NOVEMBER 2018.

PROJECT WITH METTLE.

FidelityHouse is a Social Content Network that allows users to be updated on their own interests, publish contents earning on views and be part of a fun and innovative community. Horizon Group owner of FidelityHouse is an Italian successful company headed by Francesco Fasanaro CEO and Founder.

You can buy FIH Tokens visiting the landing page www.fidelityhouse.io by clicking on “Buy FIH Tokens”. On this page you can find all information about FidelityHouse ICO and you can download the White Paper.

Authors are the beating heart of this project. Users will send original and high –quality contents and FidelityHouse offers services aimed at their attribution, protection and monetization. Users can write and publish their contents. FidelityHouse is based on a revenue share model and on blockchain technology.

FIH Tokens will offer timestamping service and protection from plagiarism. FidelityHouse will be the first Publisher to choose this innovative approach, that takes advantage of the blockchain technology, as the basis of the editorial project.

FidelityHouse ICO presale has started on 14 December 2018 and will continue until 20 February 2019. During presale investors will receive a bonus of 27%. FidelityHouse ICO will start on 21 February and will finish on 13 April 2019. From 21 February until 13 March 2019 investors will receive a bonus of 15%. From 13 March until 27 March 2019 investors will receive a bonus of 10% and in the final weeks the bonus will be of 5%.

If investors will buy FidelityHouse Token they can try free of charge FidelityHouse Chain services until 13 April 2019. FidelityHouse chain is based on 3 “cornerstones” enabled by the blockchain technology: proof of authorship, proof of license and proof of revenue.

The proof of authorship will track forever the existence and originality of a content at a given moment, together with the declaration of paternity made by the author. The proof of license will track the license granted by the author for the specific content to beneficiaries. The proof of revenue will certify the creation and allocation of the value generated by contents. Copyright is a strength with an innovative anti-plagiarism service.

NATMIN TOKEN

OCTOBER 2018.

CEO IN FOCUS.

The Natmin Token (NAT) is a digital token with a limited supply that powers the Escrow platform. It will be used to fund transactions between buyers and sellers, ensuring utmost security and peace of mind. It is built on the widely used and accepted ERC223 standard using the Ethereum Blockchain. <https://www.natmin.io/docs/whitepaper.pdf>

Online fraud is a serious problem; every prediction on its' movements agree that it will only get worse and cost businesses, consumers, and the world, an ever-increasing amount of money. After personal bad experiences with conventional Escrow services and family members becoming victims of fraud, Mr. Swanepoel decided he wanted to "simplify the Escrow Industry and make it available and easy-to-use for the everyday person, who cannot afford to be scammed." He turned to blockchain to develop a decentralized Escrow service. Transactions and agreements made with blockchain technology cannot be altered, deleted or bribed, and will not execute unless all the conditions have been met.

Natmin Pure Escrow has been working on some exiting new plans on the dispute resolution module for the Escrow platform; this will provide customers with additional stability and peace of mind when using the services. Once that is complete, the focus is slated to turn towards the client API. This will enable third party applications

to interact with the platform.

Natmin is also currently discussing the implementation of its own market place where buyers and sellers can use the escrow service.

According to its CEO, Jaco Swanepoel, the NAT Token is to be listed on BitMart, IQFinex, Yibit, WeiDex, and TokenJar, and will be listed on Eterbase once it goes live. Natmin will be open for trading on these exchanges from the 1st of February 2019.

JACO SWANEPOEL

The CEO, Founder, and driving force behind the innovative new decentralized application Natmin Pure Escrow, Jaco Swanepoel is fast becoming a force to be reckoned with in the Blockchain world.

Mr. Swanepoel is the owner of the successful cloud application development company, Pixel Fix. With this company, he has attained extensive experience during the last 2 years working specifically with smart contract development on the Ethereum blockchain. Mr. Swanepoel also has comprehensive knowledge of application development using different principles and methodologies, blockchain/decentralized applications, website design, custom cloud applications, and mobile development.

Mr. Swanepoel's latest venture, Natmin Pure Escrow, aims to revolutionize the Escrow world. Built on the Ethereum Blockchain, Natmin utilizes the highly lauded smart contract technology to implement and regulate Escrow transactions. In eliminating the human factor, Natmin has greatly reduced the immense transaction fees and potential for fraud that plagues conventional Escrow companies. <https://www.natmin.io/>

Snapparazzi

Project with Mettle - October 2018

The Post - ICO Journey has begun

(BitMart and LAToken) and other top exchanges are coming soon.

- Exclusive Stack Bonus Incentive. The longer the hodlers of SNPC keep their tokens (in wallets off the exchanges), the greater they will benefit from an exclusive monthly bonus. This is a great way to strengthen our community, reward our supporters who have believed in this project since the VERY beginning and also reward new buyers.

AN EXCLUSIVE PROGRAM OF DIFFUSION?

- In the coming months we will be announcing Snapparazzi's partners, revealing for the first time, the names of our world-famous content creators!

- Snapparazzi will be revealing a surprise addition to its current SNPC model which will allow the system to pay its users in Fiat currency (Ideal for a mass adoption).

A proper use-case for a proper utility token, are you ready?

Snapparazzi

The ultimate goal of Snapparazzi is to develop a platform that pays its content creators fairly, whilst simultaneously rewarding its viewers.

In a particularly bearish market, Snapparazzi was still able to surpass its soft cap. In such a climate, the success relied upon the appeal and demand of the app and its use-cases.

The ultimate goal of Snapparazzi is to develop a platform

that pays its content creators fairly, whilst simultaneously rewarding its viewers. Thanks to the blockchain, in particular its transparency, and the removal of intermediaries, this allows for 60% of the advertising revenue to be distributed to content creators, and 20% to viewers.

- The SNPC token is currently available on 2 exchanges
